

# DaviCal - Kalendářový server

DaviCal je server, umožňující provoz uživatelských kalendářů včetně sdílených kalendářů a uložení kontaktů pomocí protokolu CalDAV / CardDAV.

## Server

<http://www.davical.org/>

## Instalace Davical

- Debian balicek davical
- Database PostgreSQL

## Administrace

Davical ma po úspěšné instalaci dostupné webové rozhraní na webové adrese, kterou jsme nastavili při instalaci Např. `https://server/cal`. Po zadání této adresy do prohlížeče se zobrazí přihlašovací login:

**Invalid username or password.**  
**You must log in to use this system.**

Log On Please

For access to the DAViCal CalDAV Server you should log on with the username and password that have been issued to you.  
If you would like to request access, please e-mail [REDACTED]

User Name:

Password:  forget me not:

If you have forgotten your password then:

prihlasime se pridelenym loginem. Pokud jsme heslo zapomnели, muzem si nechat zaslat na registrovany e-mail. Po prihlaseni uvidime hlavni stranku administrace:

Home User Functions Help

Administration

You are logged on as gandalf

Administration Functions

The administration of this application should be fairly simple. You can administer:

- Users (or Resources or Groups) and the relationships between them
- The types of relationships that are available

There is no ability to view and / or maintain calendars or events from within this administrative interface  
To do that you will need to use a CalDAV capable calendaring application such as Evolution, Sunbird, Thunderbird (with the Lightning extension) or Mulberry.

Principals: Users, Resources and Groups

These are the things which may have collections of calendar resources (i.e. calendars).  
[Here is a list of users \(maybe :-\).](#) You can click on any user to see the full detail for that person (or group or resource - but from now we'll just call them users).  
The primary differences between them are as follows:

- Users will probably have calendars, and are likely to also log on to the system.
- Resources do have calendars, but they will not usually log on.
- Groups provide an intermediate linking to minimise administration overhead. They might not have calendars, and they will not usually log on.

Groups & Grants

- Grants specify the access rights to a collection or a principal
- Groups allow those granted rights to be assigned to a set of many principals in one action
- Groups may be members of other groups, but complex nesting will hurt system performance

Configuring Calendar Clients for DAViCal

The [DAViCal client setup page on sourceforge](#) have information on how to configure Evolution, Sunbird, Lightning and Mulberry to use remotely hosted calendars.  
The administrative interface has no facility for viewing or modifying calendar data.

Configuring DAViCal

If you can read this then things must be mostly working already.  
The [DAViCal installation page](#) on sourceforge has some further information on how to install and configure this application.

Nyni vybereme v menu volbu **User Function > View My Details**. Dostaneme se na konfiguracni stranku, kde si muzeme zmenit heslo, zmenit e-mail a pripadne zmenit i pristupova prava.

**APPLY CHANGES**

Group Memberships

- Po prvnm prihlaseni nezapomente zmenit heslo
- Dejte pozor, aby sedel zadany e-mail s opravdovym e-mailem, který pouzivate. Tuto adresu pouzivaji ostatni k zasilani pozvanek na udalosti v kalendari, které s vami planuji.
- Pomoci volby **Group Memberships** nastavujete sve clenstvi ve skupinach. Pomoci skupin se potom ridi pristupy do kalendari ostatnich, které mate videt.
- Pokud chceme nekomu pridelit pravo videt nebo jinak manupulovat s vasim kalendarem, provedete to v sekci **Principal Grants**
- Prideleni prava prohlizet vas kalendar muzete take casove omezit pomoci ticketu s datem expirace

Principal Collections					
ID	Path	Display Name	Public	Privileges	Action
<a href="#">1006</a>	/gandalf/addresses/	[redacted] addressbook	No	[from principal]	<a href="#">DELETE</a>
<a href="#">1005</a>	/gandalf/calendar/	[redacted] calendar	No	[from principal]	<a href="#">DELETE</a>
<a href="#">1022</a>	/gandalf/in/	[redacted] Inbox	No	[from principal]	<a href="#">DELETE</a>
<a href="#">2585</a>	/gandalf/nyx/	Nyx	No	[from principal]	<a href="#">DELETE</a>
<a href="#">1007</a>	/gandalf/out/	[redacted] Outbox	No	[from principal]	<a href="#">DELETE</a>

[CREATE COLLECTION](#)

- Muzete si vytvorit libovolny pocet adresarovych ulozist a kalendaru. KAzde polozce je mozne definovat oddelena prava, tj. muzete mit uloziste soukromych a firemnich kontaktu apod.
- Je mozne nastavit i nacistani externich akeInдарu s jinych aplikaci

## Klient

Na desktopu bude fungovat ve všech klientech, kteří umí rozšíření protokolu CalDAV. Já jsem testoval na Thunderbirdu / Icedove.

### Desktop

#### Thunderbird / Icedove

- Kalendář je funční po instalaci rozšíření **lightning** (Debian: iceowl-extension; Ubuntu: xul-ext-lightning; Windows:  )
- Podpora synchronizace adresare potom funguje po nainstalovani tohoto pluginu: <http://www.sogo.nu/files/downloads/extensions/sogo-connector-24.0.5.xpi>

#### Outlook

(Bud pres plugin, popr. je pokud pouzivame OpenChange)

- [http://wiki.davical.org/w/CalDAV\\_Clients](http://wiki.davical.org/w/CalDAV_Clients)

#### Webmail

## Android
