Mastodon - poznámky k instalaci

- Navod na instalaci
- Aktualizace na novou verzi
- Seznam verzí

Chybky pri instalaci

- PG::Error: ERROR: new encoding (UTF8) is incompatible

```
    First, we need to drop template1. Templates can’t be dropped, so we
first modify it so t’s an ordinary database:

    UPDATE pg_database SET datistemplate = FALSE WHERE datname =
'template1';

    Now we can drop it:

    DROP DATABASE template1;

    Now its time to create database from template0, with a new default
encoding:

    CREATE DATABASE template1 WITH TEMPLATE = template0 ENCODING =
'UNICODE';

    Now modify template1 so it’s actually a template:

    UPDATE pg_database SET datistemplate = TRUE WHERE datname = 'template1';

    Now switch to template1 and VACUUM FREEZE the template:

    \c template1

    VACUUM FREEZE;
```

Upgrade na verzi 4.1.1

Migrace databaze (pokud se po upgradu zobrazi v administraci vyzva)

```
su - mastodon
cd live
mastodon@f:~/live$ RAILS_ENV=production bundle exec rails db:migrate
```

Elasticsearch od verze 7.17 vyzaduje nastavit heslo pro pristup k obsahu

- https://www.elastic.co/guide/en/elasticsearch/reference/7.17/security-minimal-setup.html

po vygenerovani hesla nastavime odpovidajici v mastodonu do .env.production

.env.production

```
ES_ENABLED=true
ES_HOST=localhost
ES_PORT=9200
ES_USER=elastic
ES_PASS=yourpassword
```

Nakonec znovu spustime

```
mastodon@f:~/live$ RAILS_ENV=production bin/tootctl search deploy
```
