

Mastodon - poznámky k instalaci

- [Navod na instalaci](#)

Chybky pri instalaci

- PG::Error: ERROR: new encoding (UTF8) is incompatible

First, we need to drop template1. Templates can't be dropped, so we first modify it so t's an ordinary database:

```
UPDATE pg_database SET datistemplate = FALSE WHERE datname = 'template1';
```

Now we can drop it:

```
DROP DATABASE template1;
```

Now its time to create database from template0, with a new default encoding:

```
CREATE DATABASE template1 WITH TEMPLATE = template0 ENCODING = 'UNICODE';
```

Now modify template1 so it's actually a template:

```
UPDATE pg_database SET datistemplate = TRUE WHERE datname = 'template1';
```

Now switch to template1 and VACUUM FREEZE the template:

```
\c template1
```

```
VACUUM FREEZE;
```
