- PG::Error: ERROR: new encoding (UTF8) is incompatible

```
First, we need to drop template1. Templates can't be dropped, so we
first modify it so t's an ordinary database:

UPDATE pg_database SET datistemplate = FALSE WHERE datname =
'template1';

Now we can drop it:

DROP DATABASE template1;

Now its time to create database from template0, with a new default
encoding:

CREATE DATABASE template1 WITH TEMPLATE = template0 ENCODING =
'UNICODE';

Now modify template1 so it's actually a template:

UPDATE pg_database SET datistemplate = TRUE WHERE datname = 'template1';

Now switch to template1 and VACUUM FREEZE the template:

\c template1

VACUUM FREEZE;
```
